

USE-CASE FLOW SPECIFICATION

Use Case: Place Book Hold

Use Case ID: UC-02

Use Case Name: Place Book Hold

Primary Actor: Student Member

Preconditions

1. The Student Member is registered in the library system.
2. The requested book is available in the ISBN catalog.
3. The requested book is currently loaned/borrowed and is eligible for placing a hold.

Postconditions

On Success:

1. A hold request is created for the selected book.
2. The Student Member is added to the book's FIFO holding queue.
3. The Student Member is assigned a queue position.
4. The hold information is recorded by the system.

On Failure:

1. No hold request is created.
 2. The Student Member is informed that the hold request cannot be placed.
-

Main Success Scenario

1. The Student Member searches for a book using its ISBN.
2. The system searches the ISBN catalog and displays the matching book details.
3. The Student Member selects a currently loaned/borrowed book.
4. The Student Member selects the **Place Book Hold** option.
5. The system checks the Student Member's hold eligibility.
6. The system verifies that the Student Member has not exceeded the maximum allowed number of holds.
7. The system adds the Student Member to the book's FIFO holding queue.
8. The system assigns the Student Member the appropriate queue position.

9. The system displays a confirmation message with the assigned queue position.
 10. The use case ends successfully.
-

Alternate Flow — Maximum Hold Limit Reached

At Step 6:

- 6a. The system determines that the Student Member has reached the maximum allowed number of holds.
- 6b. The system rejects the new hold request.
- 6c. The system displays a message informing the Student Member that the maximum hold limit has been reached.
- 6d. The system does not add the Student Member to the holding queue.
- 6e. The use case ends without creating a new hold.
